1.   A system for transferring an address list, comprising:

a personal communication device containing an address database;

a wireless communication system capable of establishing a wireless communication link with the personal communication device;

a wireline communication network connected to the wireless communication system; and

a computer connected to the wireline communication network, the computer containing an address software that is capable of extracting a plurality of addresses in an address database and sending the plurality of addresses to the personal communication device, the personal communication device storing the plurality of addresses in the address database of the personal communication device, wherein the computer is not part of the wireline communication network and is not part of the wireless communication system.

2.   The system of claim 1, wherein the personal communication device is a cellular telephone.

3.   The system of claim 2, wherein the wireless communication link is a digital personal communication system protocol that encapsulates a wide area network protocol.

---

4 (amended). The system of claim 2, wherein _an_ [the] internet protocol encapsulates a hypertext protocol.

5 (amended). The system of claim 2, wherein _an_ [the] internet protocol encapsulates an electronic mail protocol.

6. The system of claim 2, wherein the cellular telephone contains an address transfer program.

7. The system of claim 6, wherein the address transfer program requests a telephone number for a transfer.

8. The system of claim 7, wherein the address transfer program requests a file name for the transfer.

9. The system of claim 7, wherein the address transfer program allows a user to select a plurality of address fields for the transfer.

10. A method of transferring an address list, comprising the steps of:

(a) selecting an address transfer program at a first electronic device, the first electronic device is not part of a wireline communication network and is not part of a wireless communication system, the first electronic device containing a first address book;

(b) entering an electronic address of a personal communication device, the personal communication device is not part of the wireline communication network and is not part of the wireless communication system, the personal communication device containing a second address book;

(c) setting up a communication path between the first electronic device and the personal communication device, the communication path including a wireless portion and a wired portion; and

(d) transferring a plurality of addresses from the first address book to the second address book.

11. The method of claim 10, wherein step (d) further includes the step of:

(d1) transferring the plurality of addresses from the personal communication device to the first electronic device.

CLAIM 12 (CANCELLED)

13.   The method of claim 10, wherein step (a) further includes the step of:

(a1) selecting a file of addresses.

14 (amended).   The method of claim 10, wherein step (a) further includes the step of:

(a1) selecting a field in a [the] file of addresses.

15.   The method of claim 10, wherein step (b) further includes the step of:

(b1) entering a universal resource locator.

16.   The method of claim 10, wherein step (b) further includes the step of:

(b1) entering a telephone number.

17.   The method of claim 10, wherein step (b) further includes the step of:

(b1) entering an email address.

18.   A computer-readable program containing computer-readable instructions that when executed by a computer performs the following steps:

(a) displaying an address transfer option that extracts a plurality of addresses from an address database;

(b) requesting an electronic address of an electronic device, when the address transfer option is selected;

(c) establishing a communication link with the electronic device through a communication network; and

(d) receiving the plurality of addresses at the electronic device and storing the plurality of addresses in an address list of the electronic device.

19.   The computer-readable program of claim 18, wherein step (b) further includes the steps of:

(b1) selecting a file of addresses.

20 (amended).   The computer-readable program of claim 18, wherein step (b) further includes the steps of:

(b1) selecting a field of a [the] file of addresses.
